

R/3® System

As of Release 4.0, implementation of R/3 will be both easier and faster. New graphical tools facilitate the modification of forms intended for serial printing.

The integration of SAPscript into the R/3 System has a number of advantages. It means that you can

- design your own forms
- print large numbers of copies efficiently
- produce forms in different languages
- use different output media (such as fax and optical archiving)

SAPscript in R/3 thus offers a complete solution to professional print management.

SAPscript® 4.0

Integrated Text Management with new Graphical Interface

Release 4.0 sees developments which will make SAPscript, the word processing tool in the R/3 System, considerably easier to use:

the new PC Editor and graphical Form Painter have simple and intuitive designs, working entirely on the wysiwyg principle: "What you see is what you get". In short, a milestone!

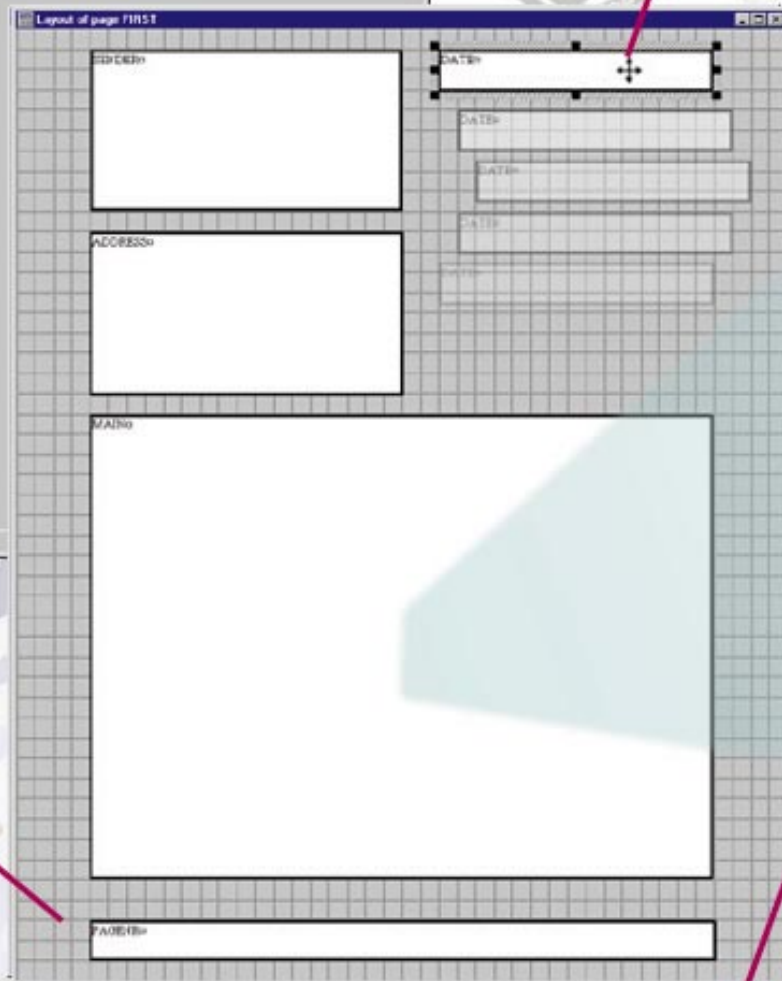

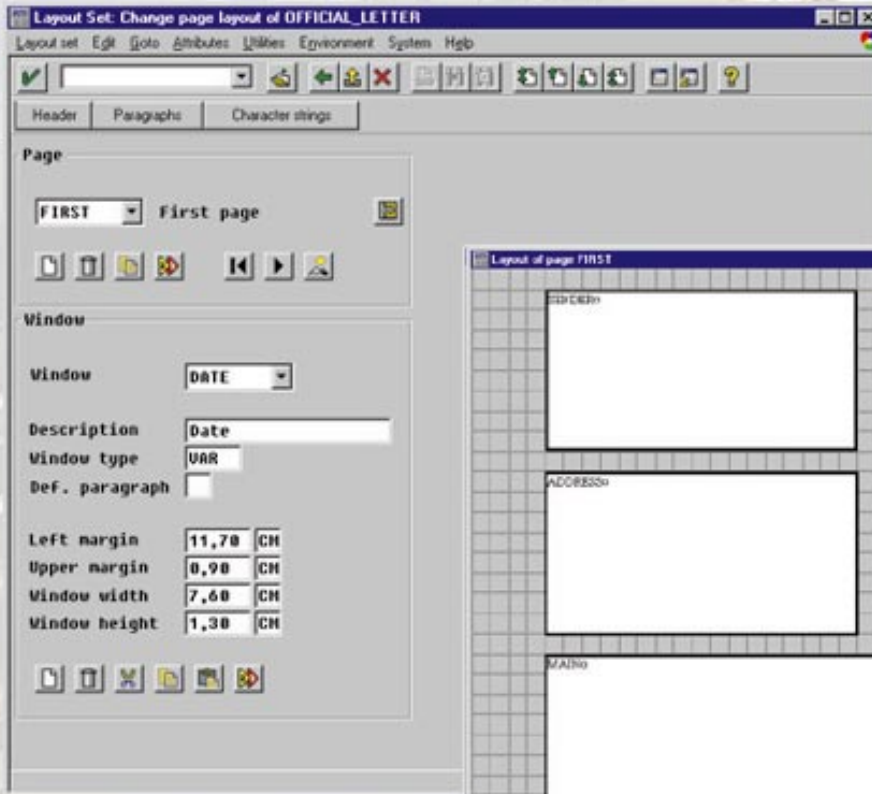

The Form Painter

Graphical Page Layout Design

Drag & drop:

You can change output areas with simple mouse operations.

Alignment to grid:

All output areas can be aligned to a grid if required. The grid width can be defined by the user.

Window texts are edited using the new Editor

The PC Editor

WYSIWYG Word Processing

Scalability:

The system automatically offers only those functions which are relevant to the current application.

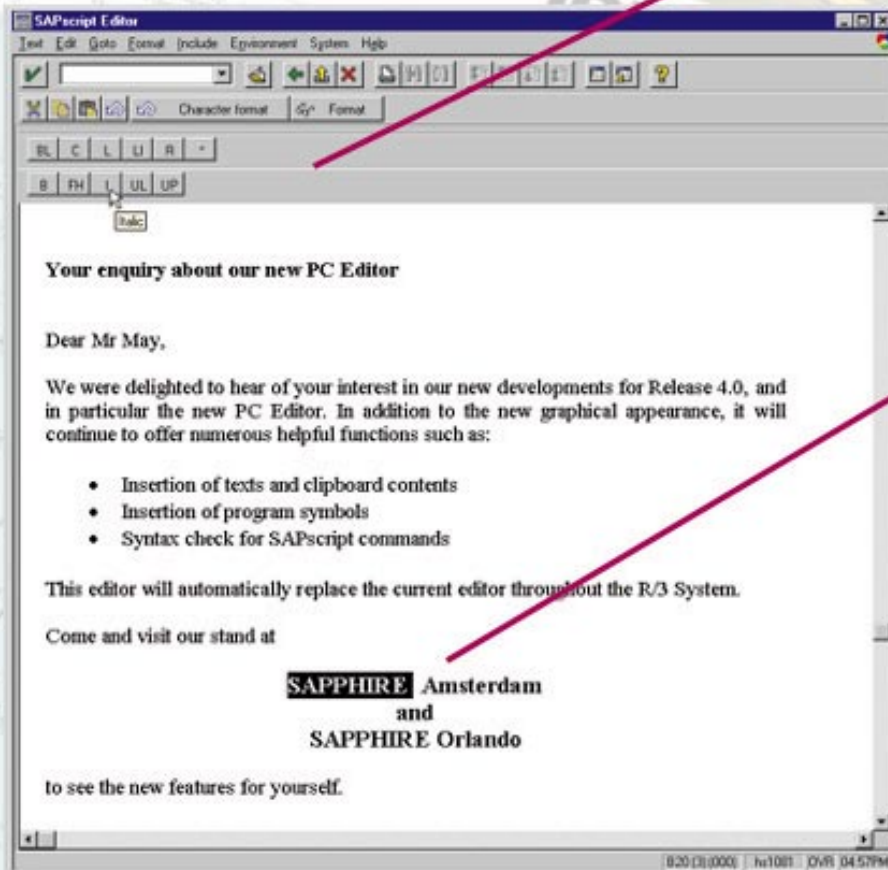

WYSIWYG:

“What You See Is What You Get”

Paragraph formatting such as block or centered, and character formats such as different fonts are displayed on-screen.

Cut & Paste:

You can use the mouse to move selected text.

Company profile - heilerSoftware

heilerSoftware

heilerSoftware, Stuttgart, is a SAP Development Partner and has been developing high-level components for integration into standard software and strategic implementation in business applications since 1987. As well as word processing components for the HighEdit family of products, they have also developed components for graphics display, spellchecks, table display and Internet components.

heilerSoftware carries out consultancy and analysis for international firms in the industrial, retail and financial services sectors, developing component-based solutions which they then integrate into client/server and Intranet applications.

Gebhard Heiler GmbH, Mittlerer Pfad 5, 70499 Stuttgart, Tel.: +49-7 11-1 39 84-0, <http://www.heiler.com>

Professional Text Management for your Business

The time and cost required to create and print documents should not be underestimated. It is therefore important to be able to create and print documents quickly and easily, especially, for example, in financial accounting, where you often need to print several thousand documents each day. SAPscript, the text management system for SAP® R/3, is particularly notable for its integration and its extensive functionality.

New Editor, New Functions

The new SAPscript Editor allows you to carry out all functions using the mouse or pushbuttons (cut and paste, for example). Paragraph and character formats, such as block format, bold print and different font sizes, are shown on-screen in the Editor.

In addition to the new graphical display, there is also a wide range of other useful functions. For example:

- Inclusion of texts and clipboards
- Insertion of program symbols
- Syntax check for SAPscript commands

The Editor replaces all previous text entry facilities in R/3, for example, for writing mails or entering material texts. In total, there are well over 100 places in the R/3 System where users will profit from the new Editor.

This development also demonstrates SAP's strategy of incorporating external components where it is sensible to do so, while also maintaining the high capability for integration of the R/3 System. The technical basis of the Editor is HighEdit – a software component from heilerSoftware (Stuttgart). This control contains outstanding functionality, and can be integrated seamlessly with other R/3 Basis programs. A decisive factor in leading SAP to choose HighEdit was its compact construction and the way in which the Editor functions available can be tailored to the requirements of the individual application. This guarantees, for example, that all orders have the same layout without the user having to refer to various style guides.

Intuitive Layout Design with the Graphical Form Painter

SAPscript layout sets allow you to optimize performance in form printing for orders, invoices and so on. This is a critical success factor for businesses with large amounts of correspondence.

You can arrange the setup of layout sets to reflect your own "corporate identity". This task plays an important role in R/3 Customizing.

In Release 4.0, the task of creating and adjusting layout sets will be made easier by the new Form Painter, with its intuitive and easy-to-use graphical user interface. You can now position and change output areas (for address, sender or order items, for example) using the mouse and techniques such as drag and drop or cut and paste. Automatic alignment with a grid makes page setup easier.

The new text Editor also comes into play here: You can use it to enter layout set texts and see an instant print preview.

The new PC Editor and Form Painter are available for Windows 95 and Windows NT 4.0.

Technology and Service

R/3 software is based on client/server architecture. R/3 is designed as an open system for use on operating systems from a variety of vendors. Along with the software, SAP offers you a complete spectrum of services along the R/3 product life cycle: preventive system checks, professional consulting in organizational and technical issues ranging from project planning to system implementation, qualified staff training, and 24-hour support.

SAP's quality management system for software development meets the international ISO 9001 standards.
